## Definitions and Remarks

### Interest and Principal coverage Test

The interest and principal coverage test is done at the CPR which is derived from Belfius internal Prepayment model. This CPR changes over time.

Costs, Fees and Expenses Related to Covered Bonds are simulated based on the assumption of a fixed amount of EUR 5 million p.a. and 7 bp on the outstanding public sector loan balance.

### Liquidity Test

The liquidity test is done as defined in the Royal Decree. The liquidity test is done at the most conservative CPR assumption, being the CPR at which the cash flow comes in at the slowest speed, being 0% CPR

### Interest Type

The interest type "Fixed" means that the interest rate of a loan is fixed during the entire life of the loan. The interest "Resettable" means that the interest rate resets based on a certain benchmark rate at pre-determined moments during the life of the loan.

### Prepayments

The monthly percentage is defined as:  $\text{Amount Prepaid during the month} / (\text{Initial Balance} - \text{Scheduled Payments})$

The annual percentage (CPR) is defined as:  $1 - (1 - \text{monthly percentage})^{12}$

In order to calculate the prepayment rates, only those loans are taken into account that were present in the cover pool during the entire month. Loans that were taken out of the cover pool during the past month or added to the cover pool during the past month are excluded for the prepayment calculation.

### Amortisation Profiles

For the purpose of calculating the amortisation profiles, the interest and principal payments, loans with a resettable rate are simulated using the relevant forward OLO rates in order to simulate the interest resets and the resulting monthly interest and principal payments amounts.

No yield compression is assumed in the calculations provided in this report where CPR assumptions different from 0% are used.

### Principal Repayment Types

Annuity: repayment of a loan in equal instalments throughout the repayment period. Principal and interest components of the instalments change over time, but the amount of total periodic payment is constant.

Linear: repayment of a loan in equal principal instalments. Total periodic payments decrease over time.

Progressive: repayment of a loan in increasing periodic instalments due to gradual increase of the principal component of the instalments over time.

Degressive: repayment of a loan in decreasing instalments due to gradual decrease of the principal component of the instalments over time.

Bullet: repayment of a loan by a single payment at the maturity date.

Manual amortisation: repayment schedule of a loan is not parameterized by a formula and is based on a mutual agreement between a borrower and the bank.

### Provinces

The territory of Belgium is divided into three Regions, two of which, Flanders and Wallonia, are in turn subdivided into 5 provinces each.

- Flanders consists of the provinces Antwerp (Antwerpen), East Flanders (Oost-Vlaanderen), Flemish Brabant (Vlaams-Brabant), Limburg and West Flanders (West-Vlaanderen).

- The provinces Hainaut, Liège, Luxembourg, Namur and Walloon Brabant (Brabant wallon) are part of Wallonia.

The third Region, Brussels-Capital Region, is neither a province nor part of a province. The territory of the Brussels-Capital Region remains and falls outside the scope of the split of the country into provinces. The provinces are autonomous institutions and are under the supervision of the Federal State, the Communities and mainly the Regions.

### Municipalities

The level of administration that is closest to the individual is the local authority or municipality. When the Belgian State was created in 1831, there were 2739 municipalities. Since the merger of communes in 1975, there are still 589 municipalities. The municipalities already existed before the creation of the Belgian State and were recognised by the 1831 Constitution. Their organisation is laid down in the law of 1836. In 1988 the new municipality act was enacted. From the time they were set up, reference was made to "municipal autonomy". That does not mean that the local politicians can do anything they like, but they do have extensive autonomy in the context of the powers that they exercise, under the supervision of higher authorities. Each region exercises its supervision over the municipalities in its territory. The supervision over the municipalities by other authorities, i.e. the Communities and the Federal State, is limited to the fields for which the Communities and the Federal State hold powers.

In Belgium there are 589 municipalities:

- 308 Flemish cities and municipalities are spread over five provinces in Flanders;
- 262 Walloon cities and municipalities are spread over five provinces in Wallonia; and
- 19 municipalities are spread over the Brussels-Capital Region

## Public Center for Social Welfare

Every citizen who legally resides in Belgium has the right to social assistance and social integration provided by the Public Centre for Social Welfare (“PCSW”), “CPAS/OCMW”. The “Centre Public d’Action Sociale/Openbaar Centrum voor Maatschappelijk Welzijn” are public institutions with legal personality under public law. They provide social services ensuring the well-being of every citizen. Their activities include the distribution of financial assistance to the needy people, the exploitation of nursing homes and hospitals, etc. Examples of social services provided by the CPAS/OCMW include financial help, medical help, housing, legal advice, etc. The social assistance aims to ensure the entire population a minimum income (“leefloon/revenu d’intégration”). There is one CPAS/OCMW per municipality, or 589 in total. By law, the municipality is required to cover the deficits of the CPAS/OCMW. The fact that CPAS/OCMW is a separate institution from the municipality itself, is historical, whereas in other countries such social services are given by the municipalities themselves. Each municipality has, besides a municipal council, a separate CPAS/OCMW council appointed by the municipal council. Thus, they are not directly elected except in some municipalities with language facilities.

## Police Zone

In Belgium, the police services have been structured into two levels: the federal (the Federal Police) and the local level (the Local Police). The municipalities are responsible for the local police which is organised in 196 police zones: 50 police forces cover the territory of one municipality (mono-municipal police zone) and 146 cover more than one municipality (multi-municipal police zone). The Federal Police and the Local Police are autonomous and subordinated to different authorities, but linked in regards to reciprocal support, recruitment, manpower mobility and common training. Each local police chief is responsible for the execution of local law enforcement policy and ensures the management, organisation and distribution of missions in the local police force. She or he works under the authority of the mayor in one-city zones, or under a police board composed of all the mayors from the different municipalities in a multi-municipal police zone. The multi-municipal police zone has its own legal personality while the mono-municipal police zone has no distinct legal personality from the municipality.

## Intermunicipal and municipal entity

In Belgium, municipalities are in charge of the provision of several public services, including waste management, water management, social housing, environment and energy distribution. Local authorities are allowed to create independent entities to facilitate the execution of some municipal tasks.

- In Wallonia two types of municipal public entities have been defined, known as ordinary and autonomous municipal entities (régies communales ordinaires et autonomes). Autonomous municipal entities have a separate legal identity from the municipality and can operate in industrial or commercial sectors. Ordinary municipal entities do not have a separate legal identity from the municipality.

- In Flanders, municipalities are allowed to set up “independent agencies” either 1/ in-house (intern verzelfstandigde agentschappen - IVA) or 2/ external (externe verzelfstandigde agentschappen - EVA). Although IVAs do not have a proper legal personality, they can operate independently (swimming-pools, libraries, etc.). EVAs are distinct legal entities that can either be an autonomous public corporation or adopt a private law structure (company, non-profit organisation such as ASBL or foundation). Municipalities can also share the management of specific municipal interest functions (activities and services) via inter-municipal entities (intercommunales). These are public law entities that come under both private and public law. They must have at least 2 municipal shareholders and their capital can be either entirely public (“pure” inter-municipal entities) or bring together public and (to a limited extent) private partners (“mixed” municipal entities).

## Public Hospitals

The Belgian hospital sector combines public and private hospitals. Public hospitals are for the most part owned by a CPAS/OCMW, an inter-municipal entity or an association of CPAS/OCMW (which is a legal form of association that groups together local authorities, CPAS/OCMW and, in some cases, the provincial government or private shareholders). Both private and public hospitals are nonprofit organisations. All hospitals in Belgium are governed by the Belgian hospital law (“Gecoördineerde wet op de ziekenhuizen en andere verzorgingsinrichtingen/Loi coordonnée sur les hôpitaux et autres établissements de soins” of 10 July 2008). The hospital sector is for some aspects dependent of the State and for others of the communities and regions. Hospital legislation and financing mechanisms are the same for both the public and private sectors. The only differences are that for public hospitals internal management rules are more tightly defined and their deficits are covered, subject to certain conditions, by local authorities or inter-municipal associations. The three communities act as supervisory authorities.
