Cost of Risk and Impairments: Belfius' expected credit losses (ECL) are calculated in a 4-pillar approach, according to a waterfall principle*

Pillar 1

Stage 1 and 2 provisions are calculated in a mechanical mode, based on a view on the macroeconomic conditions, using 4 scenarios (neutral, optimistic, pessimistic and stress) with each their weight.

1H 2022

Update of the macroeconomic factors to reflect the impact of the second-round effects of the Covid-crisis (rising energy prices, inflation, rising interest rates,...) and of the Russian/Ukrainian conflict.

Pillars 2 and 3

If Belfius considers that certain risk pockets, defined in terms of sectors and counterparts with a potentially increased credit risk, are not sufficiently covered by the mechanical provisions, certain expert overlays are added to stage 1 and 2.

1H 2022

Adjustment of the expert overlays, by integrating the risks related to energy and inflation and to the Russian/Ukrainian conflict, while reducing the importance of the Covid-19 adjustments.

Pillar 4

For counterparts in a default status (stage 3), the regular impairment process is run and specific provisions are calculated and booked.
