Description and historical evolution of the Underlying Value

Dexia Equities L Euro 50 is a compartment of Dexia Equities L, a UCITS incorporated under the laws of Luxembourg. The assets of this compartment consist mainly of a portfolio of variable-yield securities, mainly shares, convertible bonds and warrants issued for the most part by European companies and traded on the stock exchanges of those countries. At least two thirds of the net assets of the portfolio of this compartment are invested in equity-type transferable securities included in the Dow Jones EURO STOXX 50® index, although they are not themselves indexed. Two-thirds of the net assets will always be invested in euro-denominated securities on these markets.

The compartment may also hold, on an ancillary basis, cash or money market instruments whose residual maturity does not exceed 12 months.

Description and historical evolution of the Dow Jones Euro Stoxx 50 ® index

General

The Dow Jones EURO STOXX 50 ® index represents the performance of 50 companies representing the market sector leaders in the Euro zone. The index is a free float market capitalisation weighted index which captures around 60% of the underlying market capitalisation of the Dow Jones EURO STOXX Total Market ® Index. Components weightings are based on the number of free float shares, i.e. those shares that are available for trading.

The index was developed with a base value of 1000 as of 31 December 1991.

The index is continuously calculated and quoted.

Calculation method and dissemination

The Dow Jones EURO STOXX 50 ® (Price EUR) index is calculated with the Laspeyres formula which measures price changes against a fixed base quantity weight.
The formula can be simplified as follows:

$Index_t = M_t / D_t$

D_t	= B_t / Base Value = divisor at time (t)
P_{i0}	= the closing price of stock (i) at the base date (31 December 1991)
q_{i0}	= the number of shares of company (i) at the base date (31 December 1991)
p_{it}	= the price of stock (i) at time (t)
q_{it}	= the number of shares of company (i) at time (t)
C_t	= the adjustment factor for the base date market capitalisation
t	= the time the index is computed
M_t	= market capitalisation of the index at time (t)
B_t	= adjusted base date market capitalisation of the index at time (t)
X_{it}^{EURO}	= cross rate: domestic currency in euros of company (i) at time (t) {applies only for companies that are not traded in euros}
Base value	= 1,000 for the blue chip indexes and 100 for all other indexes on the base date; i.e. 31 December 1991

The closing value of the Dow Jones EURO STOXX 50 ® index is calculated at 20.00 CET (Central European Time) based on the closing/adjusted price of the shares in the Dow Jones EURO STOXX 50 ® index. If a stock did not trade all day then the previous day's closing/adjusted price is used. The same applies in case of a suspended quotation or stock exchange holiday.

Revision of the index

Annual review procedure:

(1) Selection List

- For each of the 18 market sectors, the largest stocks in the Dow Jones EURO STOXX ® index qualify for the selection list until the coverage is as close to, above or below, 60% of the relevant Dow Jones EURO STOXX ® Total Market ® Index (TMI) sector™s total free float market capitalisation at the end of August, with changes effective on the third Friday in September.
- All current components of the Dow Jones EURO STOXX 50 ® index.
- All stocks on the selection list are then ranked by free float market capitalisation.
- In exceptional cases the supervisory board could make additions or deletions to the selection list.

(2) 40-60 Rule

The 40-60™ rule is then applied to select the blue chip stocks from the selection list:

- The largest 40 stocks on the list are selected.
- The remaining 10 stocks are selected from the largest remaining current stocks ranked between 41 and 60.
- If the number of stocks selected is still below 50, the largest remaining stocks are selected to bring the total to 50.

In addition, a selection list is also published on the first trading day of every month to indicate possible changes to the blue chip index composition at the next annual review or in case of extraordinary corporate actions.

The free float factors are reviewed quarterly. If the free float weighting of a blue chip component is more than 10% of the total free float market capitalisation of the Dow Jones EURO STOXX 50 ® index at a quarterly review, then it is reduced to 10% by a weighting cap factor that is fixed until the next quarterly review.
