

Beursgenoteerde ETFs willen de prestatie van de onderliggende index zo goed mogelijk evenaren.

Daarbij kunnen we een onderscheid maken tussen ETFs die de index volgen door middel van een **fysieke replicatie** of een **synthetische replicatie**.

Wilt u weten welke techniek een bepaalde ETF gebruikt? Dat vindt u terug u in de officiële documentatie van de ETF, zoals het prospectus en KID.

Een **fysieke** ETF bootst de index na door alle (fysiek-full) of bijna alle (fysiek-deels) effecten van de index aan te kopen.

Een **synthetische** ETF repliceert de evolutie van de index zonder rechtstreeks te beleggen in de effecten van de index. In plaats van de effecten die in de index zitten fysiek aan te kopen, wordt hier belegd in een mandje kwalitatieve aandelen of obligaties die als zakelijk onderpand gaat dienen voor een zogenaamde swapovereenkomst met een beleggingsinstelling.

De inhoud van de 'top 10 posities' (zie samenstelling van de ETF) van een Synthetische ETF kan tot verwarring leiden: de posities hebben namelijk niet noodzakelijk een verband met de onderliggende index.

Op de website van de emittent vindt u voor de meeste ETFs gegevens terug over de eigenlijke portefeuille, de portefeuille van de index en de tegenpartijen waarmee gewerkt wordt.

**Een kapitalisatie ETF** herbelegt de inkomsten van zijn beleggingen rechtstreeks.

**Een distributie ETF** keert periodiek, gewoonlijk om het kwartaal of halfjaar, een dividend uit op basis van de interesten en dividenden die hij ontvangt.
