

Liste des ETFs disponibles dans Re=Bel (mis à jour le 17/01/2024)

Les ETFs cotés en bourse ont pour objectif de **reproduire le plus fidèlement possible la performance de l'indice sous-jacent**.

Une distinction peut être faite entre les ETFs qui suivent l'indice par le biais d'une **réplication physique** ou d'une **réplication synthétique**.

Vous voulez savoir quelle technique utilise un ETF en particulier? Vous la trouverez dans la documentation officielle de l'ETF, telle que son prospectus et son KID.

Un **ETF physique** réplique l'indice en achetant la totalité (physique-complet) ou la quasi-totalité (physique-partiel) des titres de l'indice.

Un **ETF synthétique** reproduit le mouvement de l'indice sans investir directement dans les titres de l'indice. Au lieu d'acheter physiquement les titres de l'indice, l'investissement porte sur un panier d'actions ou d'obligations de qualité qui serviront de garantie pour un accord dit de swap avec une banque d'investissement.

Le contenu des "10 premières positions" (voir composition de l'ETF) d'un ETF synthétique peut prêter à confusion : les positions n'ont pas nécessairement un lien avec l'indice sous-jacent.

Sur le site web de l'émetteur, pour la plupart des ETFs, vous trouverez des détails sur le portefeuille réel, le portefeuille de l'indice et les contreparties utilisées.

Un **ETF de capitalisation** réinvestit directement les revenus provenant de ses investissements.

Un **ETF de distribution** verse périodiquement, généralement par trimestre ou semestre, un dividende grâce aux intérêts et dividendes qu'il perçoit.

Nouveaux ETFs ajoutés en janvier 2024 (mis à jour le 17/01/2024)
