PART B - OTHER INFORMATION

RISK INDICATOR

In order to increase the transparency of the risks involved in investment products, Belfius Bank SA/NV has developed a synthetic risk indicator through a scale going from 0 (lowest risk) to 6 (highest risk). The exact risk level for any investment product is determined in function of following criteria: the degree to which capital will be refunded at maturity, term of the relevant Note, type of return (distribution or capitalisation), credit risk and complexity (Underlying and strategy). Other important criteria, such as the liquidity risk of Belfius Bank SA/NV and the market risk, are not taken into account.

Risk Level: 3

IRR: The internal rate of return is a rate of return used to measure the profitability of an investment: it is the annualized effective compounded return rate that makes the net present value of all cash flows from a particular investment equal to zero.

These simulations are fictitious examples and by no means represent reliable indicators.

The Net IRR simulations are based upon the current withholding tax of 27%.
